N-cadherin precursor, neuronal - mouse
C;Speciaes: Mus musculus (house mouse)
C;Date: 30-Jun-1993 #sequence_revision 30-Jun-1993 #text_change 22-Jun-1999
C;Accession: A32759; A46163
R;Miyatani, S.; Shimamura, K.; Hatta, M.; Nagafuchi, A.; Nose, A.; Matsunaga, M. Science 245, 631-635, 1989
A;Title: Neural cadherin: role in selective cell-cell adhesion.
A;Reference number: A32759; MUID:89346748; PMID:2762814
A;Accession: A32759
A;Molecule type: mRNA
A;Residues: 1-906 <MIY'>
A;Accession: A32759
A;Miyatani, S.; Copeland, N.G.; Gilbert, D.J.; Jenkins, N.A.; Takeichi, M. Proc. Natl. Acad. Sci. U.S.A. 89, 8443-8447, 1992
A;Title: Genomic structure and chromosomal mapping of the mouse N-cadherin gene
A;Reference number: A46163
A;Status: preliminary
A;Molecule type: DNA
A;Molecule type: DNA

FUNCTION: CADHERINS ARE CALCIUM DEPENDENT CELL ADHESION PROTE THEY PREFERENTIALLY INTERACT WITH THEMSELVES IN A HOMOPHILIC MANNER IN CONNECTING CELLS; CADHERINS MAY THUS CONTRIBUTE TO . SORTING OF HETEROGENEOUS CELL TYPES. LI-CADHERIN MAY HAVE A FINT THE MORPHOLOGICAL ORGANIZATION OF LIVER AND INTESTINE.

SUBCELLULAR LOCATION: Type I membrane protein.

TISSUE SPECIFICITY: LIVER AND INTESTINE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        intestine."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DNPPRLAKDYTGLFFCHPLSAPGSLIFEATDDDQHLFRGPHFTFSLGSGSLQNDWEVSKI

THEY PREFERENTIALLY INTERACT WITH THEMSELVES IN A HOMOPHILIC
MANNER IN CONNECTING CELLS; CADHERINS MAY THUS CONTRIBUTE TO THE
SORTING OF HETEROGENEOUS CELL TYPES.
SUBCELLULAR LOCATION: Type I membrane protein (Probable).
TISSUE SPECIFICITY: KIDNEY-SPECIFIC.
SIMILARITY: CONTAINS 6 CADHERIN DOMAINS.

Cell Sci. 106:401-409(1993).

THEY PREFERENTIALLY INTERACT WITH THEMSELVES IN A HOMOPHILIC MANNER IN CONNECTING CELLS; CADMERINS MAY THUS CONTRIBUTE TO THE SORTING OF HETEROGENEOUS CELL TYPES. MAY PLAY AN IMPORTANT ROLE IN RETINAL DEVELOPMENT.

SUBCELLULAR LOCATION: Type I membrane protein.

TISSUE SPECIFICITY: DISTRIBUTED WIDELY IN MOUSE TISSUES WITH HICLEVELS PRESENT IN BRAIN, SKELETAL MUSCLE, AND THYMUS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           musculus

T "Structure of the human N-cadherin gene: YAC analysis and f chromosomal mapping to 18q11.2.";
Genomics 22:172-179(1994).
C -1- FUNCTION: CADHERINS ARE CALCIUM DEPENDENT CELL ADHESION THEY PREFERENTIALLY INTERACT WITH THEMSELVES IN A HOMOP MANNER IN CONNECTING CELLS; CADHERINS MAY THUS CONTRIBU SORTING OF HETEROGENEOUS CELL TYPES. N-CADHERIN MAY BE NEURONAL RECOGNITION MECHANISM.
C -1- SUBCELLULAR LOCATION: Type I membrane protein.
C -1- SIMILARITY: CONTAINS 5 CADHERIN DOMAINS.
